

Different Keys for Different Places

Using the same password for multiple sites opens the door to greater losses.

MAKE YOUR INFORMATION MORE SECURE

by creating a password that is complex to others yet memorable to you!

DON'T REUSE — Use different passwords for different accounts, just as you use different keys for your car, home and mailbox.

USE MFA — Use multifactor authentication whenever available.

KEEP IT SAFE — Too many passwords? Use a password manager to store your passwords securely. And don't share your passwords.
